

**Q1 BUSINESS REVIEW**  
**1.1.-31.3.2021**

Enersense International Plc

**Making  
a zero-emission  
society a reality.**

## OUTLOOK FOR 2021

The company expects its turnover to be EUR 215–245 million in 2021. The company expects its EBITDA, excluding non-recurring costs arising from the integration, to be EUR 12–15 million in 2021. Because of the seasonal nature of the company's business operations, its turnover and EBITDA are usually at their highest during the second and third quarters and part of the fourth quarter.

**Enersense reports on its operations in line with its business areas, which support its strategy: Smart Industry, Power, Connectivity, Staff Leasing and International Operations.**

### TURNOVER BY BUSINESS AREA

EUR 1,000

	1–3/2021	1–3/2020	Change, %	1–12/2020
Smart Industry	20,361	10,422	95.4 %	64,571
Power	10,838	-	-	18,916
Connectivity	8,463	-	-	23,419
Staff Leasing	1,950	3,369	-42.1 %	13,800
International Operations	10,736	1,038	934.3 %	23,748
Turnover not included in the business areas	71	-	-	-

### TURNOVER BY TARGET AREA

EUR 1,000

	1–3/2021	1–3/2020	Change, %	1–12/2020
Finnish sites	38,918	10,686	264.2	111,671
International sites	13,501	4,143	225.9	32,783

## BUSINESS DEVELOPMENT JANUARY–MARCH 2021

### Smart Industry

Smart Industry helps customers improve the reliability of their production plants and the efficiency of their maintenance operations. The company develops digital solutions for improving productivity and provides resource and contracting services and subcontracting chain management services for domestic and international industry projects.

The turnover of the Smart Industry segment in the review period was EUR 20.4 million.

The Smart Industry business is divided into two units: Smart Services (maintenance and operation services and subcontracting chain management services) and Smart Operations (resource, project and contracting services). The Smart Services business progressed as planned in the first quarter. The volume of the Smart Operations business was higher than expected during the review period.

The order backlog increased as expected in January–March and is predicted to remain high throughout the financial period. The significant increase in orders indicates a continued strong demand.

The profitability of business operations was better than planned in the first quarter, which was one of the successes of the review period. In February, we renewed a plant maintenance contract with a major Finnish industrial company for at least four years, which was significant for our business operations.

The coronavirus pandemic has caused delays in maritime industry projects, but the impacts have been short-term. The risk of the business impact of the pandemic continues to exist in all our business areas in the forthcoming review period.

### Power

Power helps customers implement the energy transition through services that cover the entire life cycle of the energy sector. The services include the design, construction and maintenance of transmission grids, electric substations and wind farms. The business also provides solutions for charging systems for electrically powered transport and electricity storage.

The turnover of the Power business was EUR 10.8 million in the review period.

Its substation, power line and wind power business projects progressed slightly more rapidly than planned. The productivity of its maintenance and service business operations was also at a strong level. Overall, the volume of its operations was better than expected in the review period.

The order backlog increased typically during the review period. Demand is expected to continue to be strong, and investments related to wind power in particular are expected to increase demand over the next few years.

So far, the impacts of the coronavirus pandemic have been minor, and projects have not been delayed. Corona has not caused significant sickness absences for our employees.

### Connectivity

Connectivity helps customers by providing mobile and fixed network services and ensuring their operability. The company is involved in all phases of the life cycles of data networks, as well as designing, building and maintaining fixed and wireless data networks.

The turnover of the Connectivity business was EUR 8.5 million in the review period.

The construction of mobile and fixed networks decreased slightly in the first quarter of the year compared with previous quarters. This was due to seasonal variation. However, demand in the total market for installation and maintenance work remained strong, considering that the first quarter is typically weaker than the rest of year.

The coronavirus pandemic did not cause significant sickness absences for our employees during the review period.

## Staff Leasing

Staff Leasing provides a diverse range of flexible personnel solutions for the needs of industry and construction in Finland. The division supports the resourcing of all business areas within the Group.

The turnover of the Staff Leasing business in the review period was EUR 2.0 million.

The first quarter of the year is typically a low-volume season in construction and, partly, also in industrial personnel services. The general uncertainty and weak economic situation caused by the coronavirus pandemic had a negative impact on customers' purchasing volumes during the review period.

The impacts of cost discipline and operational development began to be reflected in the unit's operations and performance towards the end of the review period.

## International Operations

International Operations covers Enersense's international business operations in Germany, France and the United Kingdom, as well as the Baltic business transferred as part of the Empower acquisition.

The turnover of the International Operations business in the review period was EUR 10.7 million.

The Baltic countries are currently implementing their joint plan to decouple from the Russian electricity grid by the end of 2025. With regard to this, Enersense signed agreements on two major high-voltage projects in Lithuania in the first quarter of the year.

The coronavirus pandemic did not affect order intake in the review period. The sickness absences of the company's own employees have increased in the Baltic countries, but this has not had any significant impact on business operations. Labour mobility between countries was more challenging than usual in the first quarter of the year, but the negative impacts were minimised through work reorganisation.

The French subsidiary continued to operate profitably. Personnel resources have been complemented in Germany. The coronavirus pandemic has not caused significant sickness absences for our employees in these countries.

Business development in the United Kingdom continued during the review period.

## KEY RISKS AND UNCERTAINTIES

---

The spread of the coronavirus pandemic, the coronavirus variants and the third wave of the pandemic may reduce confidence in the economy. The coronavirus pandemic can still affect project decisions and project operation chains in the industry, in addition to delaying start-up decisions and ongoing projects. The pandemic may affect employees' willingness to travel, which highlights the risk related to employee availability. In other words, the pandemic may have an impact on Enersense's operations, turnover and result in 2021 in many ways.

Enersense has a number of major key customers whose purchasing behaviour have a significant impact on its business performance. If a major customer transferred its purchases from Enersense to its competitors or significantly changed its operating model, or if a significant project ended, discontinued or decreased unexpectedly, the company would have limited opportunities to replace the customer volume over a short period of time.

In addition, large fixed-price projects are typical of Enersense's business operations, and the profitability of such projects requires Enersense to estimate the related contract risks and production costs with sufficient accuracy, in addition to successful project management. The company often enters into project-specific contracts, which involve uncertainty in terms of successful competitive bidding. This makes it more difficult to estimate the company's performance and financial position over a period of time longer than the order book.

If Enersense is not able to recruit, train, motivate and retain highly competent employees, it may not necessarily be able to compete effectively or fully implement its strategy.

Enersense's risks of damage are mainly related to people, property and information technology. Although the company has protected its operations and property by means of insurance, the materialisation of risks may result in damage to people and property or business interruption.

The company has ongoing legal disputes, some of which are in progress in general or administrative courts, including a case concerning penalty payments related to competition law in the Supreme Administrative Court which may lead to damages. There is currently no information available concerning the outcome of the disputes and legal proceedings, meaning that their adverse impact on the company's financial situation is uncertain. However, they have no significant short-term impacts on the company's operations. The company has assessed the potential impacts, and has recorded provisions based on these assessments.

When the company completes acquisitions or expands its operations into new countries, it is possible that the turnover and profits of Enersense's foreign subsidiaries and/or branches will not meet its expectations. In addition, changes in customer relationships, local labour markets, political conditions and legislation, as well as changes in or discontinuation of the company's locations, may have an adverse impact on Enersense's business operations, performance and financial position.

## FINANCIAL REPORTING

Enersense International Plc will publish its half-year report for January–June 2021 on 13 August 2021.

## FINANCIAL INFORMATION

This business review has been prepared in accordance with the Finnish accounting legislation, good accounting practice and the recognition and valuation principles concerning the financial statements of 31 December 2020. The full-year figures in the business review are audited. The quarterly figures are unaudited. The figures in this review have been rounded, so the sums consisting of the figures in the columns or rows may not correspond exactly to the figures presented as the totals for the columns or rows.

## CALCULATION PRINCIPLES FOR KEY FIGURES

### **EBITDA**

Operating profit + depreciation and impairment

### **EBITDA, % of turnover**

100 x (EBITDA/turnover)

### **Adjusted EBITDA**

Operating profit + depreciation and impairment + non-recurring items

### **Adjusted EBITDA, % of turnover**

100 x (adjusted EBITDA/turnover)

### **Operating profit (EBIT)**

Turnover + other operating income – materials and services – personnel expenses – other operating expenses – share of the result of associates – depreciation and impairment

### **Operating profit, % of turnover**

100 x (operating profit/turnover)

### **Operating profit before amortisation of intangible assets related to acquisitions and impairment of goodwill (EBITA)**

Operating profit + amortisation of intangible assets related to acquisitions + impairment of goodwill

### **Operating profit before amortisation of intangible assets related to acquisitions and impairment of goodwill, %**

100 x ((operating profit + amortisation of intangible assets related to acquisitions + impairment of goodwill)/turnover)

### **Profit (loss) for the period, % of turnover**

100 x (profit (loss) for the period/turnover)

### **Equity ratio, %**

100 x (equity / (balance sheet total – advances received))

When calculating the equity ratio, a minority interest is not taken into account in equity if the minority interest is negative.

### **Gearing, %**

100 x ((interest-bearing debt – cash in hand and at bank) / equity)

### **Return on equity, %**

(100 x profit for the period/average equity during the review period)

### **Earnings per share, EUR**

Profit for the period / weighted average adjusted number of shares
