

Enersense and Scanfil to cooperate on the assembly of high-power charging stations

Enersense International Plc
Press release 9 May 2023 at 11:50 a.m.

Enersense Charging Oy, a manufacturer of high-power charging stations for electric mobility, and Scanfil Plc, a manufacturing partner for the electronics industry, have begun cooperation in the manufacturing of Enersense's new high-power charging stations.

Enersense's new high-power charging station enables an individual charger to increase the charging power from the previous 30 kilowatts to 160 kilowatts. Enersense will deliver the first high-power fast charging sites to Sweden during the spring.

"The cooperation with Scanfil has started very well. Scanfil has long and strong experience in the assembly of electronic equipment and I believe that the cooperation also offers us great growth opportunities. We are now able to rapidly increase our production volumes according to our customers' needs," says Topias Koskela, Head of Electric Vehicle Charging Solutions at Enersense.

The high-power charging stations are manufactured at Scanfil's factory in Sievi, Finland, and delivered directly to the end customer for on-site installation.

"The cooperation with Enersense has been outstanding. In collaboration with the customer, we were able to bring a ready product to the market in under a month. Typically, in similar projects, it can take up to 4 months. Both companies have a startup mindset characterized by speed and solution-oriented thinking. As a large global player, we can support Enersense on its growth path now and in the future," says Jussi Mökkönen, Scanfil's Sievi factory Sales Manager.
