

# Enersense has signed an agreement with P2X on an equipment and pipeline contract for a green hydrogen production plant

Enersense International Plc  
Investor news, 18 July 2023 at 11:15 a.m.

Enersense, a provider of zero-emission energy solutions, has signed an agreement with P2X on an equipment and pipeline contract for Finland's first renewable green hydrogen production plant. The plant is under construction in Harjavalta and is expected to be commissioned in 2024. The order will be recognised in the order book of Enersense's Smart Industry business area for the third quarter of 2023.

Earlier this year, Enersense announced that it would be delivering steel structures for reactor modules to Q Power, a supplier of Power-to-X technology, which will be building a synthetic methane plant in connection with P2X's green hydrogen production plant.

"It is great to be involved in this project in terms of demanding pipelines. Including the reactor modules to be delivered to Q Power, we are playing a significant role in Finland's first green hydrogen construction project. These assignments also support the Smart Industry business area's growth targets," says Mikko Lampinen, COO, Enersense Works.

Enersense owns 16.3% of P2X Solutions. Through P2X, Enersense is involved in reducing the emissions of heavy transport using hydrogen and synthetic fuels and in enabling energy storage opportunities created by green hydrogen.
