

Enersense and EV charging user interface developer Monta to collaborate

Enersense International Plc
Press release, 8 November 2023 at 11:00 a.m.

Enersense, a manufacturer of high-power charging stations, has signed an agreement with Monta, a Danish operator developing user interfaces for electric vehicle charging. With the agreement, Enersense will be able to offer the services of Monta's advanced payment and management platform both in Finland and in the global market to charging station operators and consumer customers.

With the partnership, Enersense's new and old charging devices will be connected to Monta's backend system, allowing customers and service providers around the world using Monta's platform to easily deploy charging devices manufactured by Enersense to their own charging network.

"The new platform replaces the previously used browser-based interface and offers more advanced features such as dynamic pricing and smart charging. To ensure the best charging experience, Monta also offers 24/7 customer support, including driver support. I look forward to working with Monta, and I believe that this cooperation will bring many opportunities in the future, both in Finland and globally," says Topias Koskela, Head of Electric Vehicle Charging Solutions at Enersense.

Monta is a platform powering the EV ecosystem serving drivers, companies, cities, and the electricity grid with one integrated software solution. Monta was founded in 2020 and currently operates in 32 countries. In 2023, the platform has powered over 500,000 charges per month.
